Web Stack : HTML, CSS, Bootstrap, Tailwind, JavaScript, React, Mongoose, NodeJS, Express, REST API, Authentication with JWT

Databases: MongoDB

Tools : Git, Github, Render, Vercel, Canva, Linux, Postman

WORK EXPERIENCE

Sumago Infotech Private Ltd. (Pune) | [Certificate](#)

Dec 2024 - Feb 2025

Web Development Intern

- Completed a one-month full-stack web development internship using the **MERN Stack**, focusing on building a secure, role-based web application with real-time data management.
- Actively developed and integrated **RESTful APIs** using **Node.js** and **Express.js**, and implemented **authentication and authorization** using **JWT** for secure access control.
- Built a responsive and dynamic **frontend with ReactJS**, utilizing **React Hooks** and **Axios** for efficient API integration and seamless user experience.
- Gained hands-on experience with **MongoDB Atlas** for database management, **Render and Vercel** for deployment, and followed **Agile practices** and **Git-based version control** throughout the development cycle.

PROJECTS

PowerPe

- Built **PowerPe**, an electricity bill management system with separate login roles for **Admin** and **Customer**, offering role-based access and dashboard functionality.
- Admin can **create and manage bills**, view user details, and monitor payments; Customers can **view bills, history, and profile** details in a clean UI.
- Developed using **ReactJS** for the frontend and **NodeJS + ExpressJS** for the backend, with **MongoDB Atlas** for secure database storage.
- Deployed frontend on **Vercel** and backend on **Render**, ensuring smooth access and reliable cloud hosting.

CampBus

- Developed CampBus, a college bus route and fees management system with role-based login for Admin and Students, streamlining student allocation, route access and digital fee tracking.
- Built the backend with **NodeJS** and **ExpressJS**, structured around **RESTful APIs** with middleware like **CORS** and body-parser for secure data handling.
- Integrated **MongoDB Atlas** as the database solution to securely store user data, routes, and transaction records.
- Deployed the frontend on **Vercel** and the backend on **Render**, enabling full-stack cloud accessibility and smooth user experience.

Personal Portfolio Website

- Built a personal portfolio website using the **MERN stack** and **Tailwind CSS** to showcase projects, skills and achievements.
- Set up and deployed a fully responsive portfolio website, hosting the frontend on **Vercel** and backend on **Render** for smooth accessibility and cloud-based scalability.
